

EMMA

Sovereign Multi-Agent Coding Fleet

A zero-dependency, self-correcting local AI coding agent that plans, builds, and audits code **100% offline**.

Made with GAMMA

What is EMMA?

Enterprise Metacognitive Multi-Agent Fleet

A fully autonomous AI coding agent operating entirely offline – zero dependencies, zero cloud calls.

Sudarshana AST Gas Metering Shield

Halts infinite loops at the abstract syntax tree level in under **1ms**, ensuring secure and resilient local execution.

Self-Correcting by Design

Plans, builds, and audits code autonomously – with built-in rollback on any failure.

AI-Native, Not AI-Assisted

The Closed YAJNA Loop

Unlike Copilot, which only **suggests** code for a human to compile, test, and debug – EMMA operates in a fully autonomous, closed loop.

→ Generates code

→ Compiles and runs inside a **jailed sandbox**

→ Monitors runtime resources (AST gas limits, OOM crashes)

→ Dynamically **self-heals** by rolling back failures

Securing & Benchmarking Vetting Workflows

EMMA builds directly upon **Redrob's Technical Vetting and Sandbox Assessment** workflow – strengthening infrastructure and expanding platform capabilities.

Protect Redrob's Infrastructure

EMMA's AST Gas Meter and Jailed Sandbox run candidate code submissions safely, preventing scripts from crashing Redrob's systems.

Benchmark Autonomous AI Agent Teams

Enables Redrob to expand its assessment platform to **vets and benchmarks autonomous AI agent teams** for enterprise clients.

Key Takeaways

100%

Offline Execution

Zero cloud dependencies, fully
sovereign

<1ms

Loop Halt Speed

AST-level infinite loop prevention

Redrob Integrations

Infrastructure protection + AI agent
benchmarking

✓ **EMMA** is not just an AI coding tool – it is a self-healing, sandboxed, sovereign agent fleet purpose-built to secure and scale Redrob's vetting platform for the autonomous AI era.
